The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived me. The complex can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosi of or vaccination against tuberculosis caused by M. tuberculosis, M.

diagnosis

africanum or M.

povie

New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis.

The invention describes a substantially pure immunogenic polypeptide fragment (I) from Mycobacterium tuberculosis that is able to evoke a protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (I) fusion polypeptide comprising at least one polypeptide fragment (I) and at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second different amino acid sequence from M. tuberculosis, and/or including a sequence which protects the first amino acid sequence from in vivo degradation or post-translational processing; (3) a nucleic acid fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunogenic; Mycobacterium tuberculosis; immune response; infection; tuberculosis; fusion polypeptide; T-cell epitope; ESAT-6; MPT59; TB; pharmaceutical; vaccination; M. africanum; M. bovis; CFP7A; CFP30A; CFP7B; CFP39; CFP39, CFP30A; RDI-ORF; CFP10A; CFP16; CFP19; CFP23; CFP25A; CFP30B; CFP30B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               bovis. The polypeptides are also useful for diagnosing ongoing or previous sensitization in an animal with bacteria belonging to the tuberculosis complex. The invention also describes the use of CFP7A or CFP30A or a T-cell epitope of for the induction of a strong immune response in a mammal; use of CFP7B, CFP19 or MFT59-ESAT6 or a T-cell epitope of for diagnosis of TB in a mammal by performing a DTH type skin test; use of CFP27, CFP30A, RD1-ORP2, RD1-ORP3, RD1-ORP3, RD1-ORP5, MFT59-ESAT6, ESAT6-MPT59, CFP30A, CFP30A, RD1-ORP3, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, CFP30B, C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence are useful described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing
                                                                                                                                                                                                                                                                04-JUN-1999;
                                                                                                                                                                                                                                                                                                                    13-MAY-2003.
                                                                                                                                                                                                                                                                                                                                                                                                                        Acinetobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Acinetobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-NOV-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADA33271
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
